Community Food Marketplace

Complete Product Blueprint | Idea → Legal → Execution

■ SECTION 1 — IDEA OVERVIEW & PROBLEM STATEMENT

What is HomeShare?

HomeShare is a **hyperlocal, community-powered food marketplace** that connects three types of people living in the same colony or apartment complex. Unlike Swiggy or Zomato (which rely on professional restaurants and bike riders), HomeShare is entirely built on neighbourhood trust and surplus resources.

The Core Insight

Every colony has three unsolved daily problems existing side by side — yet no platform connects them. HomeShare turns these three problems into one unified solution.

The Three User Roles

SELLER — The Householder

Cooks extra food daily that typically goes to waste. Wants to earn from home without a formal job. Has time, kitchen, and skill but no platform to monetise it.

BUYER — The Bachelor

Lives away from home. Spends ₹300–600/day on unhealthy, expensive restaurant food. Craves nutritious home-cooked meals at affordable prices but has no access to them.

WALKER — The Neighbour

Goes for a daily walk in the colony. Has free time and wants micro-earnings without owning a vehicle or committing to a full-time delivery job.

The Triple Win

Sellers WIN

Earn money from food that would go to waste.
Passive income for homemakers.

Buyers WIN

Affordable, fresh, home-cooked food.
Healthier & cheaper than restaurants.

Walkers WIN

Earn while walking.
No vehicle needed.
Flexible hours, neighborhood gigs.

■ ■ SECTION 2 — STEP-BY-STEP EXECUTION PLAN (Steps 1–6)

1

PHASE 1 · VALIDATE

Validate the Idea in One Colony

- Choose 1 apartment complex or colony to pilot (50–100 homes).
- Do door-to-door interviews: ask householders if they'd sell surplus food.
- Survey bachelors on how much they spend on food daily & pain points.
- Find 5–10 willing walkers (retirees, students) for test deliveries.
- Run a 2-week WhatsApp-based manual test BEFORE building any app.
- Track: number of orders, delivery time, buyer satisfaction, seller earnings.

2

PHASE 1 · VALIDATE

Define Your Minimum Viable Product (MVP)

- List only the features needed to complete ONE full order cycle.
- Seller: post food → Buyer: browse & order → Walker: pick up & deliver.
- No fancy features yet — no subscriptions, no AI, no chat.
- Keep it to 3 screens per user type (9 screens total).
- Use React Native for a single codebase on Android & iOS.
- Set a 6–8 week build timeline for the MVP.

3

PHASE 2 · LEGAL

Complete All Legal Registrations

- Every seller must obtain FSSAI Basic Registration (annual turnover ≤ ₹12L).
- Register your company: Private Limited or LLP via MCA portal.
- Register as an e-commerce operator under GST — collect TCS centrally.
- Consult a CA to structure seller payouts and income tax compliance.
- Register as a platform aggregator under Code on Social Security, 2020.
- Contribute 1–2% per transaction to the Gig Workers Welfare Fund.

4

PHASE 2 · LEGAL

Build Trust & Safety Systems

- Require Aadhaar-based KYC for all sellers before listing food.
- Add a Kitchen Photo Verification step (upload 3 photos of kitchen).
- Create a Community Badge system — RWA-verified sellers get a green tick.
- Add buyer & walker ratings after every order (5-star system).
- Publish a clear Refund & Food Safety Policy visible before checkout.
- Add an emergency contact number for food quality complaints.

5

PHASE 3 · BUILD

Build the App — Core Features

- Seller App: food listing, photo upload, quantity, price, time window.
- Buyer App: map view of nearby food, order placement, live tracking.
- Walker App: see pickup requests nearby, navigate to seller then buyer.
- Admin Dashboard: monitor orders, flag issues, manage payouts.
- In-app payments via Razorpay (UPI, cards, wallets supported).
- Real-time order status using Firebase or Socket.io.

6

PHASE 3 · BUILD

Implement Location & Matching Logic

- Use Google Maps API to show listings within 500m radius of buyer.
- Walker matching: show pickup requests to walkers within 300m of seller.
- Set time-window logic — food listed only when marked 'Ready'.
- Add estimated delivery time (based on distance, walker speed ~4 km/h).
- Send push notifications: 'Food available near you in 10 mins!'
- Never show exact home addresses — use approximate zone for privacy.

■ ■ SECTION 2 — STEP-BY-STEP EXECUTION PLAN (Steps 7–12)

7

PHASE 3 · BUILD

Pricing & Commission Model

- Seller sets food price (e.g. ■60–120 per portion).
- HomeShare charges 10% platform commission per order.
- Walker earns ■15–30 per delivery (paid from commission).
- GST collected by platform at 5% on restaurant services.
- Seller receives payout after platform fee deduction — daily settlement.
- Display full price breakdown to buyer before checkout (no hidden fees).

8

PHASE 4 · LAUNCH

Onboard First 50 Sellers

- Hold a 'HomeShare Seller Orientation' event in the colony.
- Assist each seller with FSSAI Basic Registration (guide or agent).
- Provide a free Onboarding Kit: food box labels, hygiene checklist.
- Photograph their first listing for free — quality photos build trust.
- Set a 'Launch Week' with 0% commission to attract early sellers.
- Create a WhatsApp group for sellers — support, tips, and community.

9

PHASE 4 · LAUNCH

Acquire First 100 Buyers

- Target bachelor-heavy areas: PG hostels, IT parks, co-living spaces.
- Offer ■50 off first order with referral code (word-of-mouth strategy).
- Partner with local gyms and wellness centres — healthy food messaging.
- Post in local Facebook groups, housing society apps (MyGate, ApartmentADDA).
- Run a '7-Day Home Food Challenge' — eat home-cooked food for a week.
- Collect testimonials and share on Instagram Reels & WhatsApp stories.

10

PHASE 4 · LAUNCH

Activate the Walker Network

- Post flyers in parks, gyms, and colony notice boards for walkers.
- Registration: name, Aadhaar, selfie, colony address — 5-minute signup.
- Train walkers with a 10-minute video: how to accept, pick up, deliver.
- Offer a ■500 joining bonus after completing first 10 deliveries.
- Create peak-hour notifications (12–1 PM, 7–9 PM) to prompt walker login.
- Build walker leaderboard — top walkers get 'Trusted Neighbor' badge.

11

PHASE 5 · SCALE

AI & Smart Features (Post-MVP)

- Add Claude AI for meal recommendations based on buyer diet preferences.
- Predictive listing — suggest to sellers what to cook based on demand.
- Smart walker routing: optimise if walker has 2+ deliveries on same walk.
- Weekly nutrition summary for buyers — 'You ate 5 home meals this week!'
- Auto-flag listings with poor ratings for seller coaching & support.
- Subscription plans: buyers pre-book 5 meals/week from preferred seller.

12

PHASE 5 · SCALE

Expand & Sustain

- After 3-month pilot success, expand to 5 nearby colonies or buildings.
- Build a Seller Certification Program — certified kitchens get top ranking.
- Partner with RWAs officially — make HomeShare a colony benefit.
- Add catering orders — birthdays, office lunches from trusted home chefs.
- Explore B2B: supply to co-working spaces, small offices nearby.
- Measure impact: food waste reduced, seller income earned, buyer savings.

SECTION 3 — LEGAL PROBLEMS & SOLUTIONS

Every problem below is a real legal requirement in India. The solution column shows exactly how to address it inside the HomeShare platform.

1 FSSAI Registration

Selling home food without FSSAI registration = ₹5L fine or 6 months jail (Sec 63 FSS Act).

✓ Solution

Mandatory FSSAI Basic Registration for all sellers during onboarding. Guide sellers through fssai.gov.in. Renewable annually for free.

2 GST Compliance

All e-commerce food sellers must register for GST regardless of turnover. Platform must collect TCS.

✓ Solution

Platform registers as e-commerce operator. Collects 5% GST centrally. Sellers don't need individual GST at small scale.

3 Gig Worker Laws

Code on Social Security 2020 requires 1–2% of platform turnover contributed to Gig Workers Welfare Fund.

✓ Solution

Register as aggregator. Contribute welfare cess per transaction. Provide accident insurance to all walkers.

4 RWA / Society Rules

Running commercial activity from home in residential zones may violate RWA bylaws.

✓ Solution

Launch with RWA partnership. Community Verified Badge for RWA-approved sellers. Voluntary colony model.

5 Data Privacy (DPDP 2023)

India's Digital Personal Data Protection Act 2023 requires explicit consent and data minimisation.

✓ Solution

Consent screen at signup. Never share full addresses. Appoint Data Protection Officer at scale.

SECTION 4 — TECH STACK & TIMELINE

Recommended Technology Stack

React Native
Frontend

Node.js
Backend

Google Maps

Razorpay
Payments

Claude AI
AI Layer

Firebase
Realtime

12-Week Launch Roadmap

Week	Phase	Key Activities	Deliverable
1–2	Validate	Colony interviews, manual WhatsApp test, demand check	Validation Report
3	Legal	FSSAI guidance setup, company registration, GST filing	All Registrations Done
4–5	Design	UI/UX wireframes, brand identity, 9-screen app design	Figma Prototype
6–8	Build	React Native app, Node.js backend, Maps + Payments	Working MVP App
9	Test	Beta test with 10 sellers, 20 buyers, 5 walkers	Bug-Free v1.0
10	Launch	Colony launch event, 0% commission week, press kit	50 Orders in Week 1
11–12	Grow	Referral campaign, RWA partnerships, walker recruitment	100 Active Users

Key Metrics to Track from Day 1

Metric	Target (Month 1)	Target (Month 3)
Active Sellers	15	50+
Active Buyers	30	150+
Registered Walkers	10	30+
Orders / Day	10	50+
Avg Delivery Time	< 25 mins	< 20 mins
Buyer Repeat Rate	30%	60%+
Seller Monthly Income	■1,500–3,000	■4,000–8,000
Food Waste Prevented	5 kg/day	20 kg/day

■ SECTION 5 — VISION & CLOSING THOUGHTS

Claude's Point of View — Why This Will Work

Most food-tech startups try to scale fast, raise VC money, and grow to 100 cities in year one. HomeShare is different — and that is its **greatest strength**. It is intentionally small, deeply local, and built on trust that already exists between neighbours. That trust is the moat no amount of VC funding can buy.

- The Problem is Real & Daily

Bachelors eat badly every single day. Householders cook extra every single day. Walkers walk every single day. This is not a once-a-week problem — it's a daily habit waiting to be redirected.
- Trust is Built In

When your food comes from the aunty in Building B who you see in the lift every morning, you trust it more than a restaurant you've never visited. Hyper-locality is a safety feature.
- Social Impact at Scale

If HomeShare has 1,000 active sellers across India each preventing 1 kg of food waste daily, that is 365 tonnes of food saved annually. The environmental case is compelling.
- The Revenue Model Works

At 100 orders/day at ■100 avg order value, the platform earns ■10,000/day from 10% commission alone — ■3.6L/month without any VC funding needed to survive.
- The Biggest Risk

Food safety. One bad food incident in the pilot colony can kill the app's reputation permanently. Invest in seller education, hygiene verification, and rapid response before worrying about scale.

"Feed Communities. Reduce Waste. Build Neighbourhoods."

HomeShare — From a conversation on June 6, 2026
